AI APPLICATIONS IN PORTS

Artificial intelligence (AI) : Analytical models that generate predictions, rules, answers, recommendations, or similar outcomes to solve complex problems .

Artificial Intelligence applications (AI) at ports are aiming to synchronize processes within the port ecosystem leading to improved efficiency, safety, and environmental benefits, including improved air quality and lower greenhouse gas emissions .

AI Applications are very much related to technologies like IoT, 5G and data sharing platforms.

Green  Ports

 5G LOGINNOV

APPLICATION EXAMPLES, COREALIS

COREALIS PREDICTOR , Predictive maintenance

Piraeus, Greece

- Increase the total operation time of the equipment and contribute to predictive maintenance
- Improve the warehouse management with just in time equipment

5/5/2021

APPLICATION EXAMPLES , 5G-LOGINNOV

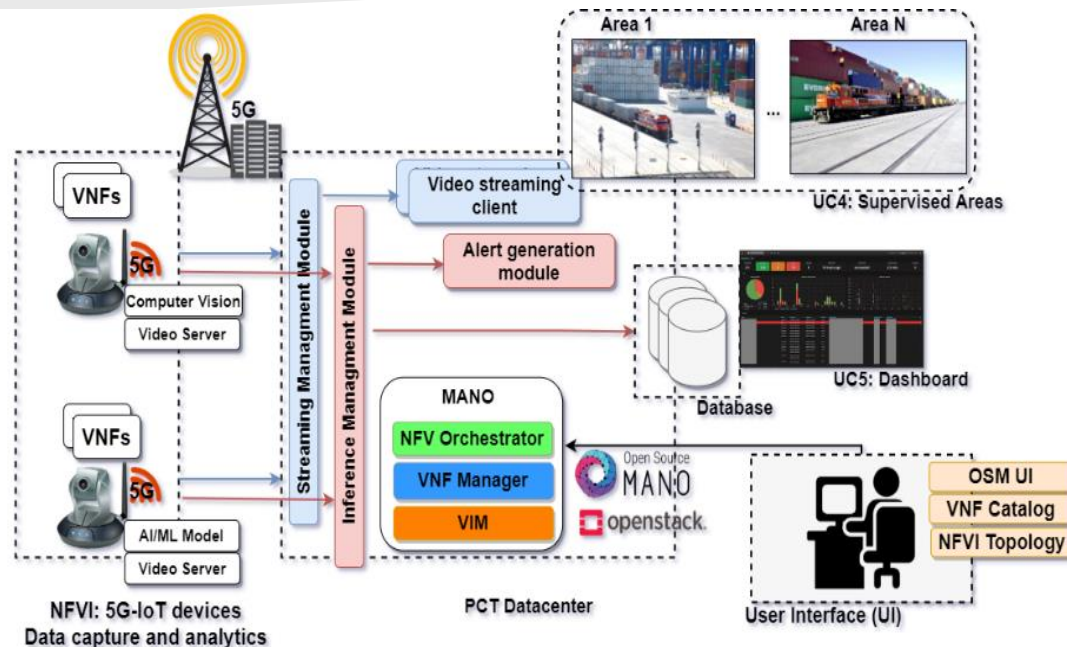

UC5: Container seal detection

UC4: Human presence detection

Use cases

AI solutions for the port:

- Human presence identification in restricted areas, risk detection
- Container seal detection

APPLICATION EXAMPLES , GREEN C PORTS

Optical imaging camera system

Meteorological Data

Air quality sensors

Port Community System

FO/DSL/
4G

PEP Platform
